

# PLASMA ARC TECHNOLOGY

You name it – We treat it

Council of Scientific &  
Industrial Research

**SEED**  
the root of sustainability

# The Consortium

Council of Scientific  
Industrial Research

Council of Scientific Industrial Research –  
Technology provider

Positronics India- Product Developer

Sustainable Energy & Environment Designs-  
EPC consultant

# About CSIR - CMERI

## CSIR-CMERI

CENTRAL MECHANICAL ENGINEERING RESEARCH INSTITUTE

- The Central Mechanical Engineering Research Institute (CMERI) is the apex R&D institute for mechanical engineering under the aegis of the **Council of Scientific and Industrial Research (CSIR)**. Being the only national level research institute in this field, CMERI's mandate is to serve industry and develop mechanical engineering technology so that India's dependence on foreign collaboration is substantially reduced in strategic and economy sectors. Besides, the institute is facilitating innovations and inventions for establishing the claims of Indian talent in international fields where Indian products shall ultimately compete.

# About Positronics

- Positronics India, sends a signal to us of mass less unit Positively charged particles. The name resembles to electron. Electronics but of opposite charge.
- The company was formed in 2005 its founder Mr Shyama Prasad Manna, a Btech Hons from IIT Kharagpur (1985) with the idea of developing innovative products in the field of New and Renewable Energy for domestic and Industries simultaneously running the show with the conventional projects. It also meets the demands of various industries in this competitive market as a profound service provider in services like Industrial Automation, Turnkey projects, Design and Engineering on instrumentation, developing PLC / SCADA based systems or even component level developments, etc.

Quality Assurance - Our Commitment

# About SEED

- SEED (Sustainable Energy & Environment Designs) is an energy and environment project management consulting company specializing in waste to energy, bio-fuels, Renewable energies, Water and wastewater treatment and bioremediation under the able leadership of Mr. P.Dev Anand who has 3 decades of sound experience.
- He is a mechanical engineer with masters in environmental management, masters in business administration. A panel consultant for world bank- waste to energy cell. An alumni of US Government –International Visitor Leadership Program of Clean Energy and Climate Change.

# Industry Overview

- High Demand for Renewable and Clean Electric Energy
- Lack of Efficient & Safe Waste Disposal Systems
- Increasingly Stringent Environmental Regulations
- Increasing Interest in Fuel Cell and Hydrogen Gas

# Plasma Gasification vs Incineration

| Plasma Gasification  | Incineration  |
|--|---|
| Occurs in the absence or near absence of oxygen, prohibiting combustion.   | Excess air is induced to ensure complete combustion.  |
| Gases resulting from degradation of organics are collected and used for production of various forms of energy and/or industrial chemicals. | All potential energy converted to heat.   |
| Products of degradation largely converted to inert (non-hazardous) glass-like slag of a volume 6% to 15% of the original solids volume.    | Combustion results in ash (as much as 30% of original solids volume) that must often be treated as hazardous waste. |
| Emissions substantially lower than those resulting from incineration   | Far greater emissions of GHG and other pollutants than with thermal gasification systems.                           |

# The Technology

**What if there were a technology..**

- That Could Transform Any Inorganic Waste Into Inert Glassy Stone?
- That Could Transform Organic Waste Into Clean Gas Used To Produce Energy?

**Plasma Arc Can Do All Of That & More:**

- It Works By Passing An Electric Arc Current Through Ionized Gas
- Any Kind Of Substance In The Arc Is Broken Down Into:
  - Clean Gases That Can Be Used To Generate Several Forms Of Energy
  - Inert Slag That Can Be Safely Reused

# Plasma – A mature technology

**Late 1800's:** Plasma Arc Heater Developed For Metal Industry

**Early 1900's:** Plasma Heaters Used In The Chemical Industry

**1950's:** Plasma Arc Cutting & Welding

**1990's:** Used To Simulate Heat Of Spacecraft Re-entry

**1960's:** Plasma Arc Utilized In Steel Mill Operations

**1991:** Plasma Research Facility Founded at Georgia Tech

**1998:** Plasma Municipal Solid Waste Plant Operational In Japan

**Today:** Used in Industrial Plants Worldwide

- Chemical Industry
- Metallurgical Industry
- Waste/Environment Industry

# What is PLASMA?

- “Fourth State” of matter
- Ionized gas at high temperature capable of conducting electrical current
- Sun, Lightning is an example from nature

- Man-made Plasma is created by passing electricity through a gas (air) causing a change in the state of the gas and a significant temperature increase often exceeding 10,000°F.

# The Plasma Torch

# Vitrification of MSW

# Temperature Profile

- Exit Gas, 1700 C
- Coke Bed, 1800 – 4000 C
- Torch Plume, > 5000 C
- Slag Pool, 1700 – 1800 C

# The Configurations

## Plasma Torch Treatment

- z Plasma Arc Generated In A Torch Body
- z Arc Pushed Out Of Torch, Forming A Plume
- z >3,000°C Plume Applied To Feedstock
- z Produces Syngas & Slag

## Plasma Arc Treatment

- z Plasma Arc Formed Between Two Electrodes
- z Solid Waste Passed Through Arc
- z Produces Syngas & Slag

# Wastes handled by Plasma

Without sorting, this process handles all kinds of waste, including hazardous waste

# Typical Composition of Syngas

Composition

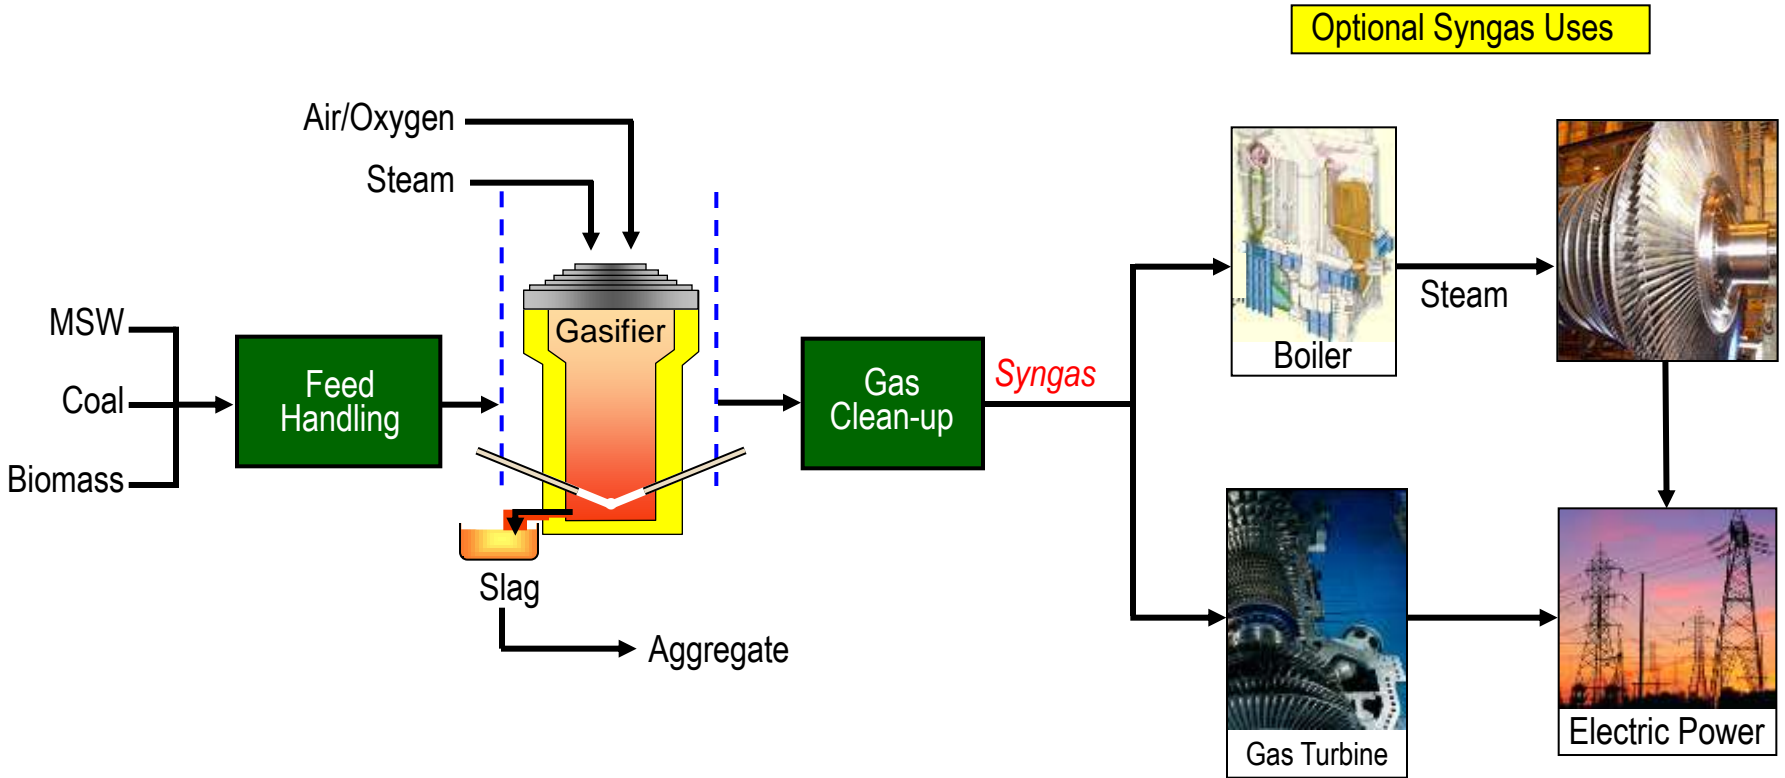

|                  |              |
|------------------|--------------|
| <b>Hydrogen</b>  | <b>42%</b>   |
| <b>CO</b>        | <b>30%</b>   |
| <b>Nitrogen</b>  | <b>17%</b>   |
| <b>CO2</b>       | <b>8%</b>    |
| <b>CH4</b>       | <b>3.20%</b> |
| <b>O2</b>        | <b>0.30%</b> |
| <b>Acetylene</b> | <b>0.20%</b> |
| <b>Ethylene</b>  | <b>0.10%</b> |
| <b>Others</b>    | <b>0.10%</b> |

# Application: Power Generation

Variety of Feedstocks → Flexible Process → Variety of Energy Products

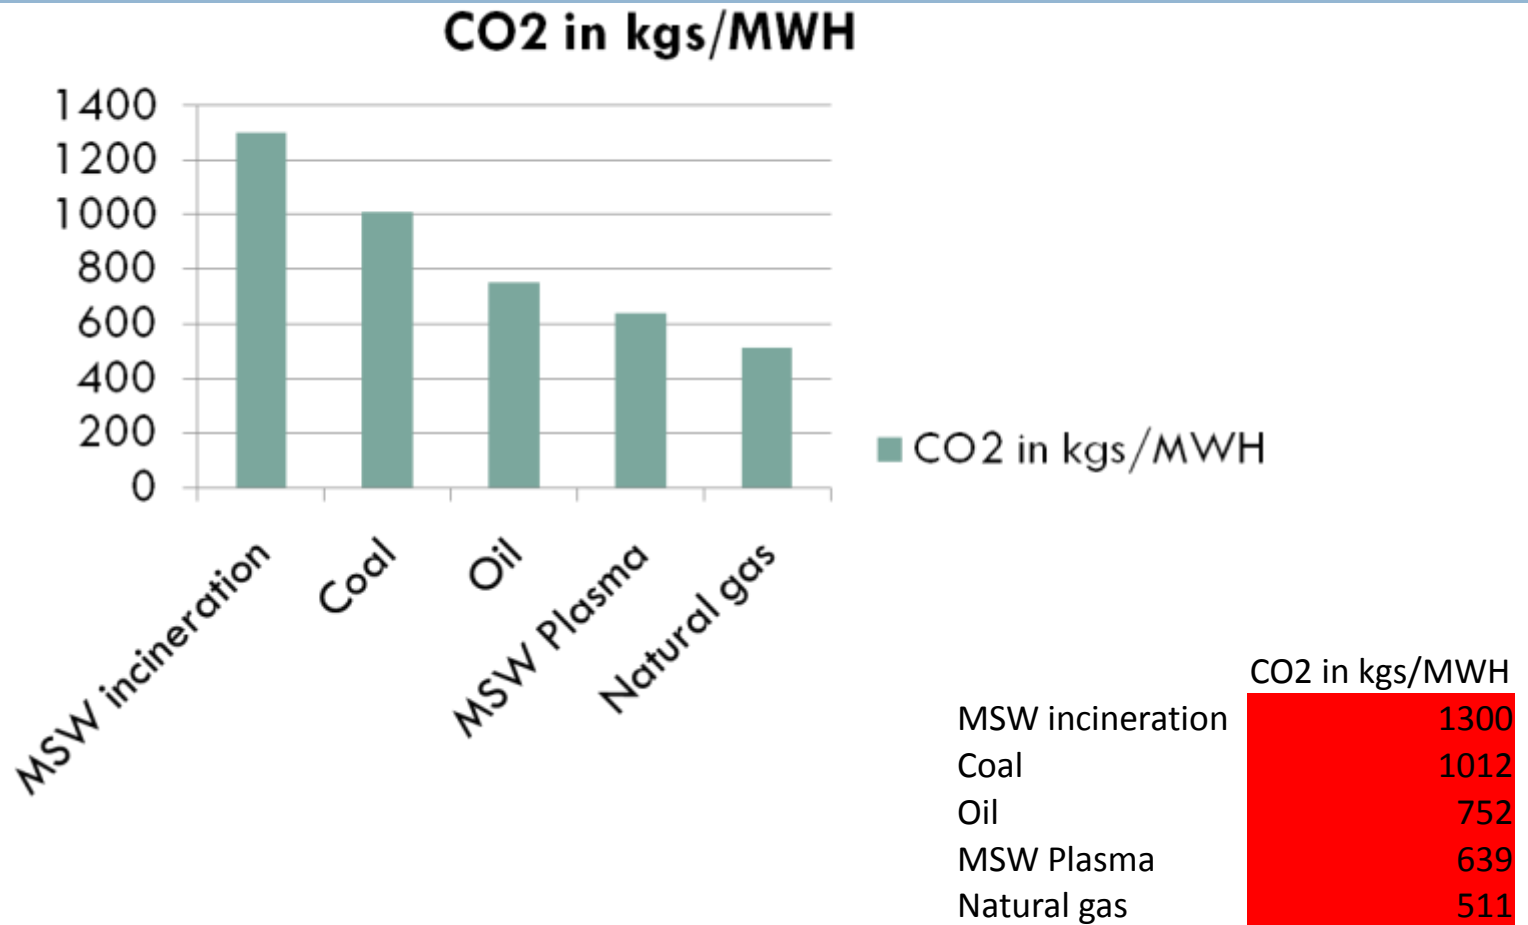

Low Cost

Gasifier

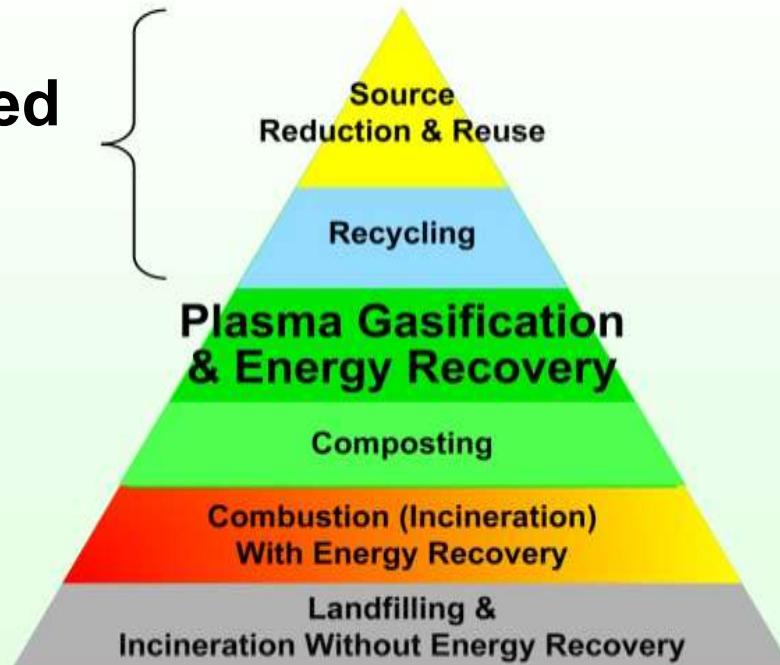

High Value

# CO2 Emissions

# Waste Handling Hierarchy

**Assumed**

**Most Favored**

## Traditional Incinerators compared to Gasification, Plasma Arc & Pyrolysis

### Differences:

Traditional mass burn incinerators **directly burn** the waste material and have ash residual

Most gasification technologies **heat** the waste first, then in a second stage of the process syngas is **combusted/incinerated**.

Vitrified slag residue instead of ash.

# Ideally suited for waste treatment

- Hazardous & toxic compounds broken down to elemental constituents by high temperatures
- Organic materials
  - Pyrolyzed or volatilized
  - May be converted to fuel gases
  - Amenable to conventional off-gas treatment
- Residual materials (radionuclides, heavy metals, etc.) immobilized in a rock-like vitrified mass which is highly resistant to leaching

All inorganic waste are vitrified in the plasma molten slag pool

# Byproducts from Municipal Solid Waste and Coal Ash

Molten Stream  
Processing  
(Product)

---

Air Cooling  
(Gravel)

Water Cooling  
(Sand)

Water Cooling  
(Metal Nodules)

Spinning Machines  
("Plasma Wool")

Salable Product Uses

---

Coarse Aggregate (roads,  
concrete, asphalt)

Fine Aggregate  
(construction products)

Recyclable Metals

Insulation, Agriculture,  
Oil Spill Cleanup

# “Black Gold” Tile Proved Superior to Recycle Glass Tile Product

# Vitrified Sediment Is Re-Usable for a Variety of Applications

- Architectural Tile Manufacture
- Glass Fiber (Rock Wool Insulation)
- Sandblasting Grit (Black Beauty<sup>®</sup>)
- Roadbed Aggregate (“Glasphalt”)
- Roofing Granules (Shingle Manufacture)
- Recycle Glass Cullet
- Environmentally Innocuous Fill Material

# Advantages

- Gasification Technology Performing at Atmospheric Pressure, Elevated Temperature and High Plant Availability
- Capable of Utilizing Integrated Mixed Waste and/or Coal Fines/Waste as Feed
- Compact and Modular
- Non-Polluting and Environmentally Safe
- High Recovery of Clean Renewable Energy as Electricity and/or H<sub>2</sub>
- Economically Competitive
- Proven Technology

# Emissions

| Parameters | Units        | USEPA standards | EPA standards | Plasma emissions |
|------------|--------------|-----------------|---------------|------------------|
| Nox        | ppmvd        | 150             | 250           | 35-40            |
| PM         | mg/dscm      | 20-24           | 34            | <5               |
| SO2        | ppmvd        | 30              | 55            | <2               |
| HCl        | ppmvd        | 25              | 15            | <10              |
| CO         | ppmvd        | 100             | 40            | <20              |
| Hg         | Micro g/dscm | 50-80           | 55            | <2               |
| PCDD/PCDF  | Nano g/dscm  | 13-30           | 25            | 0                |

# Plasma Gasification: State-of-the-Art

- **> 22:** Commercial plasma plants in operation (4 are WTE plants)
- **> 6:** Demonstration plasma plants completed or under construction
- **> 15:** Companies whose primary business is plasma technology
- **> 30:** Countries involved in plasma gasification projects

| MOISTURE%          |    | 0.4%   |
| ASH% (OPTIONAL)    |    | 14%    |
| total composition  | NA | %      |
| ULTIMATE ANALYSIS  |    |        |
| C                  |    | 88.10% |
| H                  |    | 7.90%  |
| O                  |    | 1.40%  |
| N                  |    | 0.5    |

# Schematic Process Flow Diagram (Briquettes)

# Mass balance for Briquettes

| Briquette composition |      |
|-----------------------|------|
| CARBON%               | 21%  |
| VM%                   | 40%  |
| MOISTURE%             | 14%  |
| ASH% (OPTIONAL)       | 25%  |
| total composition     | 100% |

# Project Milestones

# Business Model

Install a 25 TPD unit

Study the performance pertaining to the specific waste

Optimize the parameters

Expand the capacity

# Plasma Arc- Ideal for Waste Treatment

**Can Handle All Waste**

**Organic Material Becomes Clean Energy-Rich Gas**

**Inorganic Material Becomes Inert Slag/Glass**

**Environmentally Safe**

**Supports Energy Recovery**

**Provides Economic Opportunity**
